**IMPORTANT!
INSTALLER PLEASE NOTE :**

This water cooler has been designed and built to provide water to the user which has not been altered by materials in the cooler waterways. The grounding of electrical equipment such as telephone, computer, etc. to water lines is a common procedure. The grounding may be in the building but may also occur away from the building. This grounding can cause electrical feedback into a water cooler creating an electrolysis which creates a metallic taste or causes an increase in the metal content of the water. This condition is avoidable by installing the cooler using the proper materials as shown below.

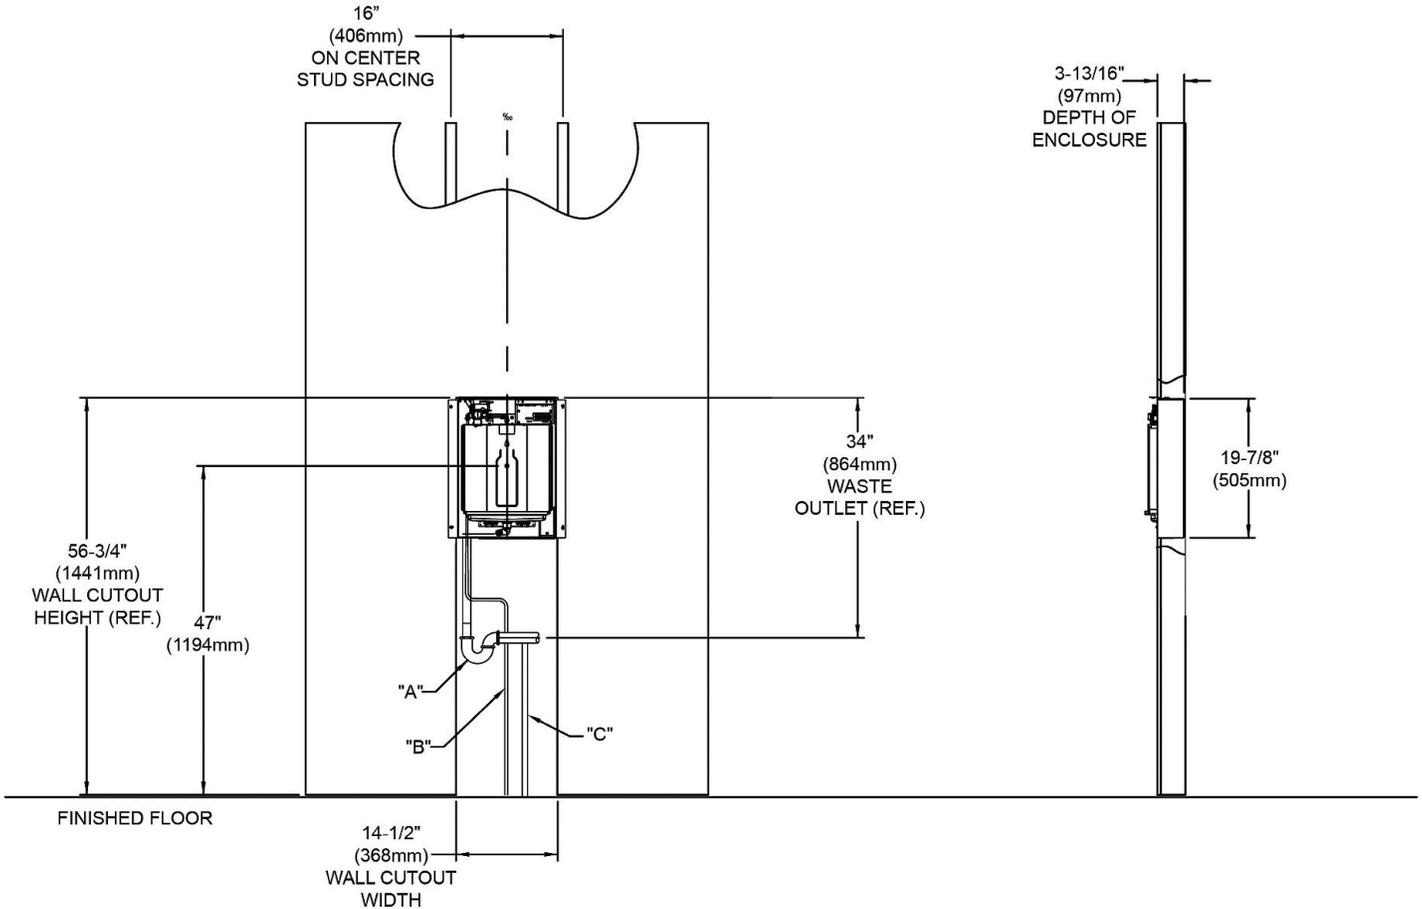

NOTICE

This built in water dispenser must be connected to the water supply using a dielectric coupling. The filter is furnished with a non-metallic ball valve which meets this requirement. The drain trap which is provided by the installer should also be plastic to completely isolate the cooler from the building plumbing system. These products are designed to operate on 40 psi to 105 psi supply line pressure.

OPERATION OF QUICK CONNECT FITTINGS

Pushing tube in before pulling it out helps to release tube

LEGEND:

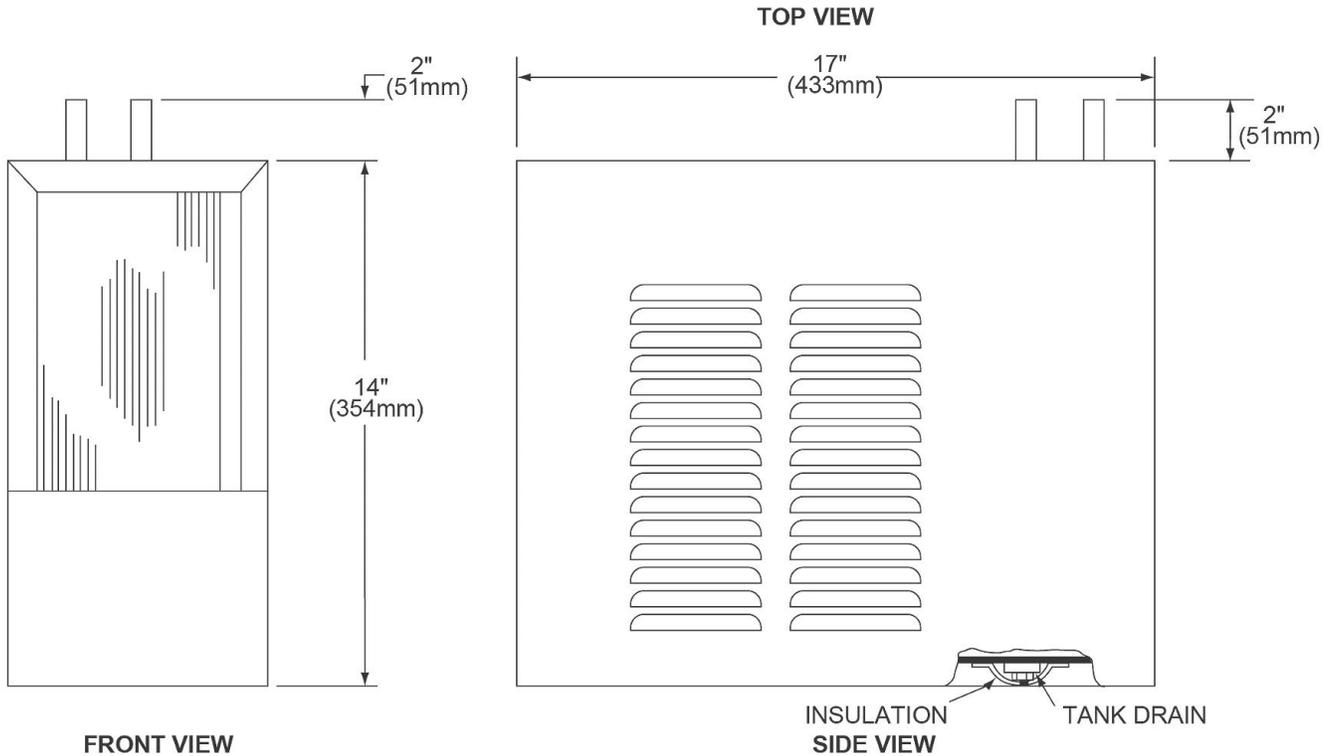

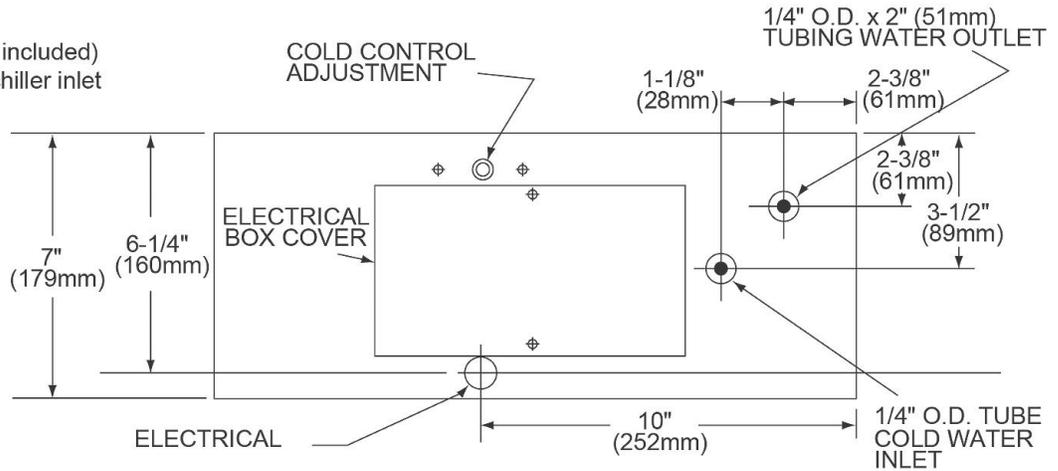

- A = Recommended location for waste outlet (optional), 1-1/4" (32mm) trap not furnished.
- B = Recommended location for 1/4" (6.35mm) water inlet, to connect from chiller.
- C = Recommended location for electrical supply. It is recommended that the supply be on dedicated 15a Hospital Grade GFCI breaker.

Operating Pressures:

Supply water - recommended water pressure range is 40-105 psi

NOTE: A service stop (not included) should be installed at the chiller inlet line.

NOTE: It is important to insure proper ventilation. If this remote chiller is physically placed against barrier or in enclosure of any kind, 4" (102mm) air space must be allowed on all sides.
